

SERVICE CONTRACTS

- Get more out of your contract

EG MainManager offers comprehensive contract administration, where key figures are often linked to response time, quality or availability of technical systems and equipment.

With our solution, users can:

Manage service contracts: Centralize your management of service contracts.

Link contracts to systems and operational plans: Ensure that your contracts are correctly linked to relevant systems and operational plans.

Manage service visits: Plan and track service visits efficiently.

Prepare checklists in service orders for the service partner: Tailor checklists in service orders for your service partners.

See contract status: Get an overview of the status of your contracts.

Smooth handling of rental contracts

The module uses existing data from the system, such as locations, costs and index adjustment, to generate draft contracts. Users can easily add additional information such as rental period and billing information.

The system calculates the price for each room automatically using predefined unit prices for different room types (offices, stalls, common areas, toilets etc.). In addition, users can manually adjust the price per unit, which enables individual, tailored contracts with each tenant.

The system generates invoicing data (weekly, monthly, quarterly or annually) which can be easily transferred to your financial system for invoicing.

3 reasons to implement Service contract module:

- 1 Good overview of contracts
- 2 Service contracts are connected to the system
- 3 Notification of expiry of contracts
