

SPACE MANAGEMENT

- Effective resource utilization and space management

EG MainManager offers a comprehensive solution for Space Management, which controls the use and disposition of space and creates clarity over organizational locations and costs related to space.

Optimize capacity, use and application

Physical spaces in buildings represent a significant financial investment, and it is crucial to manage the use of these areas as efficiently as possible.

EG MainManager enables:

Effective management of space utilization: Optimize the use of space for better resource utilization.

Precise space allocation: Allocate space to organizations and departments.

Room usage monitoring: Keep track of how rooms are used and who uses them

Leased Areas and Tenants: Manage leases and tenants efficiently.

Overview of available capacity: Identify and utilize available space for financial savings.

Calculation of rent: Calculate rental costs and financial aspects of space administration.

Metrics Management: Enter and manage metrics for accurate data.

Interactive property drawings: Import and manage detailed, interactive drawings of the property.

Prepare relocation scenarios

Process optimization

EG MainManager gives you the necessary tools to assess processes based on building geometry, outdoor areas and associated objects. Analyzes can be performed on the entire property portfolio, individual buildings, zones, floors and rooms.

Relationship between building geometry and objects

Building geometry and outdoor areas are linked to organizations, accounts and finance, providing a comprehensive overview and basis for space management

Optimized operation and use of space

EG MainManager generates lists and reports on room types and equipment, allowing you to optimize operational processes and identify areas that are not being used efficiently.
